Projects

Arduino Missile Radar System (Sem - 4)

Hardware Project

- In this Project, we built an Arduino missile radar system. It's used at border areas or in defense systems
- When an object comes under radar range then the system will detect and the buzzer starts buzzing.
- It also sends notifications to the control room or connected devices.

Resort Booking

web application for resort booking

- We created a web application for booking a resort.
- The main objective of developing this project is to manage all the information of the resort, such as check-in, check-out, and customer details.
- This handles the bookings of the resort's rooms, and the admin can manage all these things.
- Technology : HTML, CSS, JavaScript, Bootstrap, SQL, PHP

Icon Perfumes

E-commerce Website

- We built an e-commerce website for a perfume store.
- Created the frontend using HTML, CSS, and JavaScript, and connected it with the backend in Django.
- Users can easily purchase a product from our website without visiting our store.
- Technology : HTML, CSS, JavaScript, Python (Django Framework)

Al-Ameen Hospital

Organization

- This website was developed during my internship to significantly improve user experience and accessibility.
- I utilized React JS to design and implement a responsive, user-friendly interface.
- The website serves as a vital fundraising platform for the hospital, aimed at providing essential support and resources for middle-class individuals.
- Technology : Reactjs, Bootstrap

Work Experience

2024/01 – 2024/06	Frontend Developer Intern Webify.ai  In this company, I worked as a frontend developer. Here, I learned a lot of things, such as knowledge of various technologies and advanced HTML, CSS, and JavaScript. I worked on real-live projects.	Ahmedabad, India
